Given a vector space X.

For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Given a vector space X. For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, \ldots, x_{\sigma(n)})\|_n = \|(x_1, \ldots, x_n)\|_n$ 

Given a vector space X. For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, \ldots, x_{\sigma(n)})\|_n = \|(x_1, \ldots, x_n)\|_n$ (A2)  $\|(x_1, \ldots, x_n, 0)\|_{n+1} = \|(x_1, \ldots, x_n)\|_n$ 

Given a vector space X. For each n, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, \dots, x_{\sigma(n)})\|_n = \|(x_1, \dots, x_n)\|_n$ (A2)  $\|(x_1, \dots, x_n, 0)\|_{n+1} = \|(x_1, \dots, x_n)\|_n$ (A3)  $\|(\alpha_1 x_1, \dots, \alpha_n x_n)\|_n \leq \max |\alpha_i| \cdot \|(x_1, \dots, x_n)\|_n$ 

Given a vector space X. For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, \dots, x_{\sigma(n)})\|_n = \|(x_1, \dots, x_n)\|_n$ (A2)  $\|(x_1, \dots, x_n, 0)\|_{n+1} = \|(x_1, \dots, x_n)\|_n$ (A3)  $\|(\alpha_1 x_1, \dots, \alpha_n x_n)\|_n \leq \max |\alpha_i| \cdot \|(x_1, \dots, x_n)\|_n$ (A4)  $\|(x_1, \dots, x_{n-1}, x_n, x_n)\|_{n+1} = \|(x_1, \dots, x_{n-1}, x_n)\|_n$ 

Given a vector space X. For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, ..., x_{\sigma(n)})\|_n = \|(x_1, ..., x_n)\|_n$ (A2)  $\|(x_1, ..., x_n, 0)\|_{n+1} = \|(x_1, ..., x_n)\|_n$ (A3)  $\|(\alpha_1 x_1, ..., \alpha_n x_n)\|_n \le \max |\alpha_i| \cdot \|(x_1, ..., x_n)\|_n$ (A4)  $\|(x_1, ..., x_{n-1}, x_n, x_n)\|_{n+1} = \|(x_1, ..., x_{n-1}, x_n)\|_n$ Such a sequence of norms is called a **multinorm** on X.

Given a vector space X. For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, \ldots, x_{\sigma(n)})\|_n = \|(x_1, \ldots, x_n)\|_n$ (A2)  $\|(x_1, \ldots, x_n, 0)\|_{n+1} = \|(x_1, \ldots, x_n)\|_n$ (A3)  $\|(\alpha_1 x_1, \ldots, \alpha_n x_n)\|_n \leq \max |\alpha_i| \cdot \|(x_1, \ldots, x_n)\|_n$ (A4)  $\|(x_1, \ldots, x_{n-1}, x_n, x_n)\|_{n+1} = \|(x_1, \ldots, x_{n-1}, x_n)\|_n$ Such a sequence of norms is called a **multinorm** on X. Example

Let X be a normed space. Put  $||(x_1,\ldots,x_n)|| := \max ||x_i||$ .

Given a vector space X. For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, \ldots, x_{\sigma(n)})\|_n = \|(x_1, \ldots, x_n)\|_n$ (A2)  $\|(x_1, \ldots, x_n, 0)\|_{n+1} = \|(x_1, \ldots, x_n)\|_n$ (A3)  $\|(\alpha_1 x_1, \ldots, \alpha_n x_n)\|_n \le \max |\alpha_i| \cdot \|(x_1, \ldots, x_n)\|_n$ (A4)  $\|(x_1, \ldots, x_{n-1}, x_n, x_n)\|_{n+1} = \|(x_1, \ldots, x_{n-1}, x_n)\|_n$ Such a sequence of norms is called a **multinorm** on X. Example

Let X be a normed space. Put  $||(x_1,\ldots,x_n)|| := \max ||x_i||$ .

#### Example

Let 
$$X = L_p(\mu)$$
. Put  $||(x_1, ..., x_n)|| := ||\bigvee_{i=1}^n |x_i|||$ .

Given a vector space X. For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, \ldots, x_{\sigma(n)})\|_n = \|(x_1, \ldots, x_n)\|_n$ (A2)  $\|(x_1, \ldots, x_n, 0)\|_{n+1} = \|(x_1, \ldots, x_n)\|_n$ (A3)  $\|(\alpha_1 x_1, \ldots, \alpha_n x_n)\|_n \le \max |\alpha_i| \cdot \|(x_1, \ldots, x_n)\|_n$ (A4)  $\|(x_1, \ldots, x_{n-1}, x_n, x_n)\|_{n+1} = \|(x_1, \ldots, x_{n-1}, x_n)\|_n$ Such a sequence of norms is called a **multinorm** on X. Example

Let X be a normed space. Put  $||(x_1,\ldots,x_n)|| := \max ||x_i||$ .

#### Example

Let 
$$X = L_p(\mu)$$
. Put  $\|(x_1, \dots, x_n)\| := \|\bigvee_{i=1}^n |x_i|\|$ .  
 $\left(\bigvee_{i=1}^n |x_i|\right)(t) = \max_{1 \le i \le n} |x_i(t)|$ 

Given a vector space X. For each *n*, given a norm  $\|\cdot\|_n$  on  $X^n$  such that (A1)  $\|(x_{\sigma(1)}, \ldots, x_{\sigma(n)})\|_n = \|(x_1, \ldots, x_n)\|_n$ (A2)  $\|(x_1, \ldots, x_n, 0)\|_{n+1} = \|(x_1, \ldots, x_n)\|_n$ (A3)  $\|(\alpha_1 x_1, \ldots, \alpha_n x_n)\|_n \le \max |\alpha_i| \cdot \|(x_1, \ldots, x_n)\|_n$ (A4)  $\|(x_1, \ldots, x_{n-1}, x_n, x_n)\|_{n+1} = \|(x_1, \ldots, x_{n-1}, x_n)\|_n$ Such a sequence of norms is called a **multinorm** on X. Example

Let X be a normed space. Put  $||(x_1,\ldots,x_n)|| := \max ||x_i||$ .

#### Example

Let 
$$X = L_p(\mu)$$
. Put  $||(x_1, \dots, x_n)|| := ||\bigvee_{i=1}^n |x_i|||$ .  
 $\left(\bigvee_{i=1}^n |x_i|\right)(t) = \max_{1 \le i \le n} |x_i(t)|$ 

The only multinorm on  $\mathbb{R}$  is the  $\ell_{\infty}$ -norm.

A sequence of norms on  $X^n$  is a **1-multimorm** if it satisfies (A1)  $||(x_{\sigma(1)}, ..., x_{\sigma(n)})||_n = ||(x_1, ..., x_n)||_n$ (A2)  $||(x_1, ..., x_n, 0)||_{n+1} = ||(x_1, ..., x_n)||_n$ (A3)  $||(\alpha_1 x_1, ..., \alpha_n x_n)||_n \le \max |\alpha_i| \cdot ||(x_1, ..., x_n)||_n$ (A4')  $||(x_1, ..., x_{n-1}, x_n, x_n)||_{n+1} = ||(x_1, ..., x_{n-1}, 2x_n)||_n$ .

for any  $x_1, \ldots, x_n \in X$ .

#### Operators

A linear operator  $T: X \to Y$  between two *p*-multinormed spaces is **multibounded** if  $\exists C > 0$  such that

$$\left\| (Tx_1,\ldots,Tx_n) \right\| \leqslant C \left\| (x_1,\ldots,x_n) \right\|$$

for any  $x_1, \ldots, x_n \in X$ .

The least such C is denoted  $||T||_{mb}$ .

 $\label{eq:multibounded} \mathsf{multibounded} \Rightarrow \mathsf{bounded}, \qquad \| \, \mathcal{T} \| \leqslant \| \, \mathcal{T} \|_{\mathrm{mb}}.$ 

T is a **multiisometry** if

$$\left\|(Tx_1,\ldots,Tx_n)\right\|=\left\|(x_1,\ldots,x_n)\right\|$$

for any  $x_1, \ldots, x_n \in X$ .

X and Y are **multiisometric** if there is a surjective multiisometry from X onto Y.

<ロ>

A *p*-multinorm on X can be viewed as a norm on  $c_{00}(X)$ ,

A *p*-multinorm on X can be viewed as a norm on  $c_{00}(X)$ , the space of sequences of elements of X that are eventually zero.

A *p*-multinorm on X can be viewed as a norm on  $c_{00}(X)$ , the space of sequences of elements of X that are eventually zero.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

 $c_{00}=c_{00}(\mathbb{R})$ 

A *p*-multinorm on X can be viewed as a norm on  $c_{00}(X)$ , the space of sequences of elements of X that are eventually zero.

 $c_{00} = c_{00}(\mathbb{R})$  ( $e_i$ ) the standard basis of  $c_{00}$ 

A *p*-multinorm on X can be viewed as a norm on  $c_{00}(X)$ , the space of sequences of elements of X that are eventually zero.

 $c_{00} = c_{00}(\mathbb{R})$  ( $e_i$ ) the standard basis of  $c_{00}$ 

$$c_{00}(X)=c_{00}\otimes X$$

A *p*-multinorm on X can be viewed as a norm on  $c_{00}(X)$ , the space of sequences of elements of X that are eventually zero.

 $c_{00} = c_{00}(\mathbb{R})$  ( $e_i$ ) the standard basis of  $c_{00}$ 

$$c_{00}(X) = c_{00} \otimes X$$
  $(x_i) \mapsto \sum_{i=1}^n e_i \otimes x_i$ 

A *p*-multinorm on X can be viewed as a norm on  $c_{00}(X)$ , the space of sequences of elements of X that are eventually zero.

 $c_{00} = c_{00}(\mathbb{R})$  ( $e_i$ ) the standard basis of  $c_{00}$ 

$$c_{00}(X) = c_{00} \otimes X$$
  $(x_i) \mapsto \sum_{i=1}^n e_i \otimes x_i$ 

This induces a norm on  $c_{00} \otimes X$  via

$$\left\|\sum_{i=1}^n e_i \otimes x_i\right\| = \left\|(x_1,\ldots,x_n)\right\|.$$

A *p*-multinorm on X can be viewed as a norm on  $c_{00}(X)$ , the space of sequences of elements of X that are eventually zero.

$$I_e = \{x \in X : |x| \leqslant \lambda e, \ \lambda \in \mathbb{R}_+\}.$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Given a Banach lattice X and a subspace  $Y \subseteq X$ . Y is an order ideal provided that if  $x \in Y$  then  $|x| \in Y$ , and if  $x \in Y$  and  $-x \leq y \leq x \in Y$  then  $y \in Y$ .

#### Example

$$X = L_p(\mu), Y = \left\{ f \in X : \operatorname{supp} f \subseteq A \right\}$$
$$X = \ell_p, Y = \operatorname{span}_{i \in A} e_i$$

Given  $0 \leq e \in X$ . The ideal generated by it:

$$I_e = \{x \in X : |x| \leq \lambda e, \ \lambda \in \mathbb{R}_+\}.$$

For  $x \in I_e$ , define  $||x||_e = \inf \{\lambda > 0 \ : \ |x| \leqslant \lambda e \}$ .

Given a Banach lattice X and a subspace  $Y \subseteq X$ . Y is an order ideal provided that if  $x \in Y$  then  $|x| \in Y$ , and if  $x \in Y$  and  $-x \leq y \leq x \in Y$  then  $y \in Y$ .

#### Example

$$X = L_p(\mu), Y = \left\{ f \in X : \operatorname{supp} f \subseteq A \right\}$$
$$X = \ell_p, Y = \operatorname{span}_{i \in A} e_i$$

Given  $0 \leq e \in X$ . The ideal generated by it:

$$I_e = \{x \in X : |x| \leqslant \lambda e, \ \lambda \in \mathbb{R}_+\}.$$

For  $x \in I_e$ , define  $||x||_e = \inf \{\lambda > 0 : |x| \leq \lambda e \}$ . Fact:  $(I_e, ||\cdot||_e)$  is a Banach lattice.

Given a Banach lattice X and a subspace  $Y \subseteq X$ . Y is an order ideal provided that if  $x \in Y$  then  $|x| \in Y$ , and if  $x \in Y$  and  $-x \leq y \leq x \in Y$  then  $y \in Y$ .

### Example

$$X = L_p(\mu), Y = \left\{ f \in X : \operatorname{supp} f \subseteq A \right\}$$
$$X = \ell_p, Y = \operatorname{span}_{i \in A} e_i$$

Given  $0 \leq e \in X$ . The ideal generated by it:

$$I_e = \{x \in X : |x| \leqslant \lambda e, \ \lambda \in \mathbb{R}_+\}.$$

For  $x \in I_e$ , define  $||x||_e = \inf \{\lambda > 0 \ : \ |x| \leqslant \lambda e \}.$ 

Fact:  $(I_e, \|\cdot\|_e)$  is a Banach lattice. It is lattice isometric to C(K) for a compact topological space K.

Given  $x_1, \ldots, x_n$  in a Banach lattice X.

<□ > < @ > < E > < E > E のQ @

Given  $x_1, \ldots, x_n$  in a Banach lattice X. Choose e so that  $x_1, \ldots, x_n \in I_e$  (e.g., take  $e = \bigvee_{i=1}^n |x_i|$ ), then we may think of  $x_1, \ldots, x_n$  as elements of some C(K).

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Given  $x_1, \ldots, x_n$  in a Banach lattice X. Choose e so that  $x_1, \ldots, x_n \in I_e$  (e.g., take  $e = \bigvee_{i=1}^n |x_i|$ ), then we may think of  $x_1, \ldots, x_n$  as elements of some C(K).

Hence, for every continuous  $f : \mathbb{R}^n \to \mathbb{R}$ , we can view  $f(x_1, \ldots, x_n)$  as a function in C(K) via

$$f(x_1,\ldots,x_n)(t)=f(x_1(t),\ldots,x_n(t)).$$

So we can view  $f(x_1, \ldots, x_n)$  as an element of  $I_e$ , hence of E.

Given  $x_1, \ldots, x_n$  in a Banach lattice X. Choose e so that  $x_1, \ldots, x_n \in I_e$  (e.g., take  $e = \bigvee_{i=1}^n |x_i|$ ), then we may think of  $x_1, \ldots, x_n$  as elements of some C(K).

Hence, for every continuous  $f : \mathbb{R}^n \to \mathbb{R}$ , we can view  $f(x_1, \ldots, x_n)$  as a function in C(K) via

$$f(x_1,\ldots,x_n)(t)=f(x_1(t),\ldots,x_n(t)).$$

So we can view  $f(x_1, ..., x_n)$  as an element of  $I_e$ , hence of E. Problem: not well defined; the result depends on the choice of e.

Given  $x_1, \ldots, x_n$  in a Banach lattice X. Choose e so that

 $x_1, \ldots, x_n \in I_e$  (e.g., take  $e = \bigvee_{i=1}^n |x_i|$ ), then we may think of  $x_1, \ldots, x_n$  as elements of some C(K).

Hence, for every continuous  $f : \mathbb{R}^n \to \mathbb{R}$ , we can view  $f(x_1, \ldots, x_n)$  as a function in C(K) via

$$f(x_1,\ldots,x_n)(t)=f(x_1(t),\ldots,x_n(t)).$$

So we can view  $f(x_1, ..., x_n)$  as an element of  $I_e$ , hence of E. Problem: not well defined; the result depends on the choice of e. Fact: well defined provided that f is **positively homogeneous**:

Given  $x_1, \ldots, x_n$  in a Banach lattice X. Choose e so that

 $x_1, \ldots, x_n \in I_e$  (e.g., take  $e = \bigvee_{i=1}^n |x_i|$ ), then we may think of  $x_1, \ldots, x_n$  as elements of some C(K).

Hence, for every continuous  $f : \mathbb{R}^n \to \mathbb{R}$ , we can view  $f(x_1, \ldots, x_n)$  as a function in C(K) via

$$f(x_1,\ldots,x_n)(t)=f(x_1(t),\ldots,x_n(t)).$$

So we can view  $f(x_1, ..., x_n)$  as an element of  $I_e$ , hence of E. Problem: not well defined; the result depends on the choice of e. Fact: well defined provided that f is **positively homogeneous**:

$$f(\lambda t_1, \dots, \lambda t_n) = \lambda f(t_1, \dots, t_n)$$
 for all  $t_1, \dots, t_n \in \mathbb{R}$  and  $\lambda > 0$ 

Given  $x_1, \ldots, x_n$  in a Banach lattice X. Choose e so that

 $x_1, \ldots, x_n \in I_e$  (e.g., take  $e = \bigvee_{i=1}^n |x_i|$ ), then we may think of  $x_1, \ldots, x_n$  as elements of some C(K).

Hence, for every continuous  $f : \mathbb{R}^n \to \mathbb{R}$ , we can view  $f(x_1, \ldots, x_n)$  as a function in C(K) via

$$f(x_1,\ldots,x_n)(t)=f(x_1(t),\ldots,x_n(t)).$$

So we can view  $f(x_1, ..., x_n)$  as an element of  $I_e$ , hence of E. Problem: not well defined; the result depends on the choice of e. Fact: well defined provided that f is **positively homogeneous**:

$$f(\lambda t_1, \dots, \lambda t_n) = \lambda f(t_1, \dots, t_n)$$
 for all  $t_1, \dots, t_n \in \mathbb{R}$  and  $\lambda > 0$ 

**Example:**  $\left(\sum_{i=1}^{n} |x_i|^p\right)^{\frac{1}{p}}$ .

Given  $x_1, \ldots, x_n$  in a Banach lattice X. Choose e so that

 $x_1, \ldots, x_n \in I_e$  (e.g., take  $e = \bigvee_{i=1}^n |x_i|$ ), then we may think of  $x_1, \ldots, x_n$  as elements of some C(K).

Hence, for every continuous  $f : \mathbb{R}^n \to \mathbb{R}$ , we can view  $f(x_1, \ldots, x_n)$  as a function in C(K) via

$$f(x_1,\ldots,x_n)(t)=f(x_1(t),\ldots,x_n(t)).$$

So we can view  $f(x_1, ..., x_n)$  as an element of  $I_e$ , hence of E. Problem: not well defined; the result depends on the choice of e. Fact: well defined provided that f is **positively homogeneous**:

$$f(\lambda t_1, \dots, \lambda t_n) = \lambda f(t_1, \dots, t_n)$$
 for all  $t_1, \dots, t_n \in \mathbb{R}$  and  $\lambda > 0$ 

**Example:**  $\left(\sum_{i=1}^{n} |x_i|^p\right)^{\frac{1}{p}}$ .  $1 \leq p \leq \infty$ .

Given  $x_1, \ldots, x_n$  in a Banach lattice X. Choose e so that

 $x_1, \ldots, x_n \in I_e$  (e.g., take  $e = \bigvee_{i=1}^n |x_i|$ ), then we may think of  $x_1, \ldots, x_n$  as elements of some C(K).

Hence, for every continuous  $f : \mathbb{R}^n \to \mathbb{R}$ , we can view  $f(x_1, \ldots, x_n)$  as a function in C(K) via

$$f(x_1,\ldots,x_n)(t)=f(x_1(t),\ldots,x_n(t)).$$

So we can view  $f(x_1, ..., x_n)$  as an element of  $I_e$ , hence of E. Problem: not well defined; the result depends on the choice of e. Fact: well defined provided that f is **positively homogeneous**:

$$f(\lambda t_1, \dots, \lambda t_n) = \lambda f(t_1, \dots, t_n)$$
 for all  $t_1, \dots, t_n \in \mathbb{R}$  and  $\lambda > 0$ 

**Example:**  $\left(\sum_{i=1}^{n} |x_i|^p\right)^{\frac{1}{p}}$ .  $1 \leq p \leq \infty$ . If  $p = \infty$ , use  $\bigvee_{i=1}^{n} |x_i|$ .

Every Banach lattice can locally be represented as C(K) space.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

— the **canonical** *p*-multinorm on a Banach lattice *E*.

For an operator  $T: E \to F$  between two Banach lattices, we say that T is *p*-multibounded if it is multibounded w.r.t. the canonical *p*-multinorms on *E* and *F*.

For an operator  $T: E \to F$  between two Banach lattices, we say that T is *p*-multibounded if it is multibounded w.r.t. the canonical *p*-multinorms on E and F. That is, there exists C > 0 such that  $\|(Tx_1, \ldots, Tx_n)\| \leq C \|(x_1, \ldots, x_n)\|$  for any  $x_1, \ldots, x_n \in X$ .

$$\left\|\left(\sum_{i=1}^{n}|Tx_{i}|^{p}\right)^{\frac{1}{p}}\right\| \leqslant C \left\|\left(\sum_{i=1}^{n}|x_{i}|^{p}\right)^{\frac{1}{p}}\right\| \text{ for any } x_{1},\ldots,x_{n}\in X.$$

For an operator  $T: E \to F$  between two Banach lattices, we say that T is *p*-multibounded if it is multibounded w.r.t. the canonical *p*-multinorms on E and F. That is, there exists C > 0 such that  $\|(Tx_1, \ldots, Tx_n)\| \leq C \|(x_1, \ldots, x_n)\|$  for any  $x_1, \ldots, x_n \in X$ .

$$\left\|\left(\sum_{i=1}^{n}|Tx_{i}|^{p}\right)^{\frac{1}{p}}\right\| \leqslant C \left\|\left(\sum_{i=1}^{n}|x_{i}|^{p}\right)^{\frac{1}{p}}\right\| \text{ for any } x_{1},\ldots,x_{n}\in X.$$

 $\|T\|_{p-\mathrm{mb}}:=\|T\|_{\mathrm{mb}}$ 

For an operator  $T: E \to F$  between two Banach lattices, we say that T is *p*-multibounded if it is multibounded w.r.t. the canonical *p*-multinorms on E and F. That is, there exists C > 0 such that  $\|(Tx_1, \ldots, Tx_n)\| \leq C \|(x_1, \ldots, x_n)\|$  for any  $x_1, \ldots, x_n \in X$ .

$$\left\|\left(\sum_{i=1}^{n}|Tx_{i}|^{p}\right)^{\frac{1}{p}}\right\| \leqslant C \left\|\left(\sum_{i=1}^{n}|x_{i}|^{p}\right)^{\frac{1}{p}}\right\| \text{ for any } x_{1},\ldots,x_{n}\in X.$$

 $\|T\|_{p-\mathrm{mb}} := \|T\|_{\mathrm{mb}}$ 

Easy fact: if 
$$T \ge 0$$
 then  $\left(\sum_{i=1}^{n} |Tx_i|^p\right)^{\frac{1}{p}} \leqslant T\left(\sum_{i=1}^{n} |x_i|^p\right)^{\frac{1}{p}}$ .

For an operator  $T: E \to F$  between two Banach lattices, we say that T is *p*-multibounded if it is multibounded w.r.t. the canonical *p*-multinorms on E and F. That is, there exists C > 0 such that  $\|(Tx_1, \ldots, Tx_n)\| \leq C \|(x_1, \ldots, x_n)\|$  for any  $x_1, \ldots, x_n \in X$ .

$$\left\|\left(\sum_{i=1}^{n}|Tx_{i}|^{p}\right)^{\frac{1}{p}}\right\| \leqslant C \left\|\left(\sum_{i=1}^{n}|x_{i}|^{p}\right)^{\frac{1}{p}}\right\| \text{ for any } x_{1},\ldots,x_{n}\in X.$$

 $\|T\|_{p-\mathrm{mb}} := \|T\|_{\mathrm{mb}}$ 

Easy fact: if  $T \ge 0$  then  $\left(\sum_{i=1}^{n} |Tx_i|^p\right)^{\frac{1}{p}} \leqslant T\left(\sum_{i=1}^{n} |x_i|^p\right)^{\frac{1}{p}}$ . So

$$\left\| \left( \sum_{i=1}^{n} |Tx_{i}|^{p} \right)^{\frac{1}{p}} \right\| \leq \|T\| \left\| \left( \sum_{i=1}^{n} |x_{i}|^{p} \right)^{\frac{1}{p}} \right\|$$

For an operator  $T: E \to F$  between two Banach lattices, we say that T is *p*-multibounded if it is multibounded w.r.t. the canonical *p*-multinorms on E and F. That is, there exists C > 0 such that  $\|(Tx_1, \ldots, Tx_n)\| \leq C \|(x_1, \ldots, x_n)\|$  for any  $x_1, \ldots, x_n \in X$ .

$$\left\|\left(\sum_{i=1}^{n}|Tx_{i}|^{p}\right)^{\frac{1}{p}}\right\| \leqslant C \left\|\left(\sum_{i=1}^{n}|x_{i}|^{p}\right)^{\frac{1}{p}}\right\| \text{ for any } x_{1},\ldots,x_{n}\in X.$$

$$\|T\|_{p-\mathrm{mb}} := \|T\|_{\mathrm{mb}}$$

Easy fact: if  $T \ge 0$  then  $\left(\sum_{i=1}^{n} |Tx_i|^p\right)^{\frac{1}{p}} \le T\left(\sum_{i=1}^{n} |x_i|^p\right)^{\frac{1}{p}}$ . So $\left\|\left(\sum_{i=1}^{n} |Tx_i|^p\right)^{\frac{1}{p}}\right\| \le \|T\| \left\|\left(\sum_{i=1}^{n} |x_i|^p\right)^{\frac{1}{p}}\right\|$ 

Hence T is p-multibounded and  $||T||_{p-mb} = ||T||_{p-mb} = ||T||_{p-mb}$ 

### **Regular operators**

So every positive operator is *p*-multibounded.
So every positive operator is *p*-multibounded.

It follows immediately that every **regular** operator is *p*-multibounded.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

So every positive operator is *p*-multibounded.

It follows immediately that every **regular** operator is *p*-multibounded.

Recall: T is regular if T = U - V for some positive U and V.

$$f(\bar{x}) = (f(x_1), \ldots, f(x_n))$$

Fact: strong *p*-multinorm  $\Rightarrow$  *p*-multinorm.

The converse is true when  $p = \infty$  or p = 2.

# Strong *p*-multinorms

### Definition

A sequence of norms on powers of X is called a **strong**  *p*-multinorm if the following condition is satisfied. Given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $\|f(\bar{x})\|_{\ell_p^n} \leq \|f(\bar{y})\|_{\ell_p^m}$  for every  $f \in X^*$ then  $\|\bar{x}\|_n \leq \|\bar{y}\|_m$ .

$$f(\bar{x}) = (f(x_1), \ldots, f(x_n))$$

Fact: strong *p*-multinorm  $\Rightarrow$  *p*-multinorm.

The converse is true when  $p = \infty$  or p = 2.

Fact: The canonical *p*-multinorm on a Banach lattice is strong.

Proof. Given a *p*-multinorm;  $p = \infty$  or p = 2.

### Proof.

Given a *p*-multinorm;  $p = \infty$  or p = 2. To prove: given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $\|f(\bar{x})\|_{\ell_p^n} \leq \|f(\bar{y})\|_{\ell_p^m}$  for every  $f \in X^*$  then  $\|\bar{x}\|_n \leq \|\bar{x}\|_m$ .

#### Proof.

Given a *p*-multinorm;  $p = \infty$  or p = 2. To prove: given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $\|f(\bar{x})\|_{\ell_p^n} \leq \|f(\bar{y})\|_{\ell_p^m}$  for every  $f \in X^*$  then  $\|\bar{x}\|_n \leq \|\bar{x}\|_m$ . Let  $Z = \{f(\bar{y}) : f \in X^*\}$ .

#### Proof.

Given a *p*-multinorm;  $p = \infty$  or p = 2. To prove: given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $\|f(\bar{x})\|_{\ell_p^n} \leq \|f(\bar{y})\|_{\ell_p^m}$  for every  $f \in X^*$  then  $\|\bar{x}\|_n \leq \|\bar{x}\|_m$ . Let  $Z = \{f(\bar{y}) : f \in X^*\}$ . Z is a subspace of  $\mathbb{R}^m$ .

#### Proof.

Given a *p*-multinorm;  $p = \infty$  or p = 2. To prove: given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $||f(\bar{x})||_{\ell_p^n} \leq ||f(\bar{y})||_{\ell_p^m}$  for every  $f \in X^*$  then  $||\bar{x}||_n \leq ||\bar{x}||_m$ . Let  $Z = \{f(\bar{y}) : f \in X^*\}$ . Z is a subspace of  $\mathbb{R}^m$ . Define  $T: Z \to \mathbb{R}^n$  via  $f(\bar{y}) \mapsto f(\bar{x})$ .

#### Proof.

Given a *p*-multinorm;  $p = \infty$  or p = 2. To prove: given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $||f(\bar{x})||_{\ell_p^n} \leq ||f(\bar{y})||_{\ell_p^m}$  for every  $f \in X^*$  then  $||\bar{x}||_n \leq ||\bar{x}||_m$ . Let  $Z = \{f(\bar{y}) : f \in X^*\}$ . Z is a subspace of  $\mathbb{R}^m$ . Define  $T : Z \to \mathbb{R}^n$  via  $f(\bar{y}) \mapsto f(\bar{x})$ . By assumption, T is well defined and  $||T : Z \subseteq \ell_p^m \to \ell_p^m|| \leq 1$ .

#### Proof.

Given a *p*-multinorm;  $p = \infty$  or p = 2. To prove: given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $||f(\bar{x})||_{\ell_p^n} \leq ||f(\bar{y})||_{\ell_p^m}$  for every  $f \in X^*$  then  $||\bar{x}||_n \leq ||\bar{x}||_m$ . Let  $Z = \{f(\bar{y}) : f \in X^*\}$ . Z is a subspace of  $\mathbb{R}^m$ . Define  $T : Z \to \mathbb{R}^n$  via  $f(\bar{y}) \mapsto f(\bar{x})$ . By assumption, T is well defined and  $||T : Z \subseteq \ell_p^m \to \ell_p^m|| \leq 1$ . Since  $p = \infty$  or p = 2, T extends to a contraction  $\ell_p^m \to \ell_p^n$ .

#### Proof.

Given a *p*-multinorm;  $p = \infty$  or p = 2. To prove: given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $||f(\bar{x})||_{\ell_p^n} \leq ||f(\bar{y})||_{\ell_p^m}$  for every  $f \in X^*$  then  $||\bar{x}||_n \leq ||\bar{x}||_m$ . Let  $Z = \{f(\bar{y}) : f \in X^*\}$ . Z is a subspace of  $\mathbb{R}^m$ . Define  $T: Z \to \mathbb{R}^n$  via  $f(\bar{y}) \mapsto f(\bar{x})$ . By assumption, T is well defined and  $||T: Z \subseteq \ell_p^m \to \ell_p^m|| \leq 1$ . Since  $p = \infty$  or p = 2, T extends to a contraction  $\ell_p^m \to \ell_p^n$ . We may view T as a matrix.

#### Proof.

Given a *p*-multinorm;  $p = \infty$  or p = 2. To prove: given  $\bar{x} \in X^n$  and  $\bar{y} \in X^m$ , if  $\|f(\bar{x})\|_{\ell_n^n} \leq \|f(\bar{y})\|_{\ell_n^m}$  for every  $f \in X^*$  then  $\|\bar{x}\|_n \leq \|\bar{x}\|_m$ .
